
Office Mammogram Procedures - COVID-19

In these times and all times, early detection of breast cancer is especially important. We continue our commitment to help prevention and one day see the end of this disease. When we provide mammograms to our patients in our office, please note the following information and procedures.

- ❑ We always clean and disinfect our equipment before and after each patient. Our staff maintains their personal cleanliness/disinfecting of their hands.
- ❑ We are providing additional cleaning before and after each mammogram event. We are using disinfectants to clean all high-touch surfaces (door handles, check-in station; handrails) to our cleaning procedures, and increase daytime cleaning during high volume days.
- ❑ Our technicians wear masks, gloves and protective glasses when working with clients.
- ❑ Please note that our normal operating procedures instructs WDC staff to not report to work if they have fever or feel ill.
- ❑ We will be asking our patients health related questions specific to COVID symptoms when scheduling and upon arrival. If you feel ill, for your safety and others, we will ask that you reschedule your mammogram.
- ❑ We are asking our patients when coming to their appointment to please bring their face mask.
{If they do not have one, we can provide}
- ❑ For all our patients, our team will follow any additional COVID-19 protocols that may arise from CDC or the State of Ohio.

We appreciate you and are committed to the health & wellness of all patients and our staff.
Thank you.
