## Mobile Mammogram Procedures - COVID-19

---

In these times and all times, early detection of breast cancer is especially important. We continue our commitment to help prevention and one day see the end of this disease. When providing mammograms to our clients using our mobile mammograms, please note the following information and procedures.

- ❑ We always clean and disinfect our equipment before and after each patient. Our staff maintains their personal cleanliness/disinfecting of their hands.
- ❑ Our technicians wear masks, gloves and protective glasses when working with clients.
- ❑ We are providing additional cleaning before and after each mammogram event. We are using disinfectants to clean all high-touch surfaces (door handles, check-in station; handrails) to our cleaning procedures, and increase daytime cleaning during high volume days.
- ❑ Please note that our normal operating procedures instructs WDC staff to not report to work if they have fever or feel ill.
- ❑ We will be taking a patient's temperature prior to them entering the mammogram check-in area with a touch-less infrared thermometer.
- ❑ We are asking our patients when coming to their appointment to please bring their face mask. *{If they do not have one, we can provide}*
- ❑ Our current 3D Coach is a contained environment. We provide routine mammograms with only one patient and one technician in the mammography room of the coach; and one patient waiting with our check-in technician in the waiting area of the coach.
- ❑ Our 3D Mobile unit receives an additional cleaning/disinfecting at the end day.
- ❑ If you feel ill, for your safety and others, we will ask that you reschedule your mammogram.
- ❑ For all our patients, our team will follow any additional COVID-19 protocols that may arise from CDC or the State of Ohio.

We appreciate you and are committed to the health & wellness of all patients and our staff.

Thank you.
